Content Creation: Copywriting, Canva, Instagram and TikTok, Basic Video Editing

Data and Analysis: Excel, Data Analysis, Statistics, PowerPoint, Google Workspace

Tools: WhatsApp Business, Notion, Buffer, Hootsuite

Technical Background: Python, SQL, Data Cleaning, Automation Scripting

Core Strengths: Clear Communication, Adaptability, Time Management, Reliable Remote Work Setup

EDUCATION

BS Software Engineering | Lahore College for Women University 2022 - 2026

CGPA 3.40 / 4.00. Coursework: Statistics, Database Systems, Artificial Intelligence, Software Requirements Engineering, SQA, Data Science, Digital Marketing.

Intermediate, FSc Pre Engineering | Punjab Group of Colleges, Lahore 2020 - 2022

Score 1024 / 1100 (93%). Merit Scholarship recipient.

EXPERIENCE

IT Coordinator | Concordia Colleges, Raiwind, Lahore Jan 2026 - Jul 2026

- Managed IT systems and digital records across campus, overseeing 50+ systems and 400+ student records while maintaining consistent uptime and minimal disruption to daily academic operations.
- Resolved technical issues for staff and students, and maintained structured documentation to reduce recurring system problems.

Computer Science Instructor | AI Chemist Science Academy, Lahore May 2025 - Sep 2025

- Delivered structured lessons across three concurrent cohorts spanning Matric, ICS, and O Level students, managing distinct syllabus and deadlines.
- Adapted teaching approaches for O Level students to meet Cambridge curriculum standards, building strong cross level communication skills.

PROJECTS

AI-Powered Financial Statement Analyzer | Python, Pandas, Google Gemini API

- Built a tool that ingests CSV and Excel bank statements and uses Pandas to clean and structure transaction data.
- Converted transaction data into structured text and fed it to the Google Gemini API to generate AI-powered financial analysis.
- Built an AI chat feature that answers user questions using transaction data as context, powered by the Google Gemini API.
- Managed LLM context window limits by capping input to 100 transaction rows per request, balancing analysis depth with token cost.

Customer Churn Prediction and Retention Analytics System | Python, SQL, Scikit-learn, Flask

- Analyzed 7,043 customer records and benchmarked 5 classification models to identify churn risk and its key drivers.
- Deployed the best-performing model, Random Forest, with 83% accuracy as a REST API for live predictions.
- Applied feature engineering and cross-validation across all five models to improve prediction reliability for data-driven retention decisions.

CareSync: Family Care Coordination Platform | React, Node.js, MongoDB, Groq AI

- Led a three-person team to build a dashboard for fair task distribution, health tracking, and automated reminders, deployed on Vercel.
- Integrated a Groq AI-powered chatbot for real-time guidance and a predictive module that flags concerning changes in key health metrics.
- Designed a rule-based Burden Score system for fair task distribution and configured email notifications via Railway.
- Promoted the platform to target users and gathered feedback through direct outreach, helping shape feature priorities.
